Improve your Cyber Defense Skills to Create a Resilient Organization

Traditional security strategies built around the “walled city” approach is a passé.

Foreword

The Covid-19 and the post-pandemic world exposed organizations and leaders to formidable cyber attacks. With almost all the workforce working from home, organizations today are forced to build a Cybersecurity Mesh, a zero-trust environment. If their employees and assets are located anywhere, the protection needs to extend everywhere. As per Gartner, these cybersecurity mesh architectures allow organizations to extend security controls to distributed assets, especially valuable now since many IT assets operate outside the traditional enterprise perimeter.

While organizations across the globe have increased their investments in cybersecurity practices, the majority of organizations have a hard time finding and hiring security professionals, which is severely impacting their ability to deliver security projects within their organizations.

With the shift left in security policies, all the projects and product teams are moving security sooner in the development process.

This is the right time to upskill into a Cybersecurity professional equipping with knowledge and skillsets towards inoculating organizations and self against cyber threats. What one needs is a new set of toolkits, skills, and an undying passion to learn, unlearn and relearn.

A bespoke program in Cybersecurity powered by EC-Council, Microsoft Azure Cloud and Terralogic Inc. designed by industry thought leaders and delivered by REVA Academy for Corporate Excellence-RACE. RACE, REVA University can help you fast track your journey to the top echelons of organizations of tomorrow. Explore the most advanced, improved version of the Master's program in Cybersecurity designed for CISO's of tomorrow.

For a discerning professional,
**enhancing skills in
cybersecurity**
is not an option anymore,
but a necessity.

Opportunities and Skills for Cybersecurity Professionals

It takes 20 years to build a reputation and few minutes
of cyber-incident to ruin it.

- Jack Welch

Creating Techno-functional Cybersecurity professionals

TECHNICAL SKILLS

Programming Fundamentals
in Python

Network Security

Opportunities

Almost all
industries
are hiring
cybersecurity
professionals

Increased cyber attacks in the post-pandemic world opened up a multitude of opportunities for qualified and experienced professionals with the right technical and functional skills. Any organizations dealing with sensitive information need qualified cybersecurity professionals for their very existence.

Banking and financial institutions, health care, e-commerce, energy and power, essential services, government organizations, and businesses of all kinds have proprietary information need to protect themselves resulting in huge demand and great career opportunities in the field. Our program participants find coveted roles in globally renowned organizations ranging from security analysts to CISOs.

The program is designed to develop well-rounded and multifaceted cybersecurity professionals with technical and functional skills.

Six Reasons to Choose Cybersecurity Program

Gain deep skills with access to
**virtual labs, cloud platforms,
and global certifications**
among a globally valid
Master's program in
Cybersecurity
and change your future forever.

“ If you spend more on coffee than on IT security, you
will be hacked. What's more, you deserve to be hacked.
- Richard Clarke ”

Six Reasons to Choose Cybersecurity Program

A program like no other; bringing experiential learning with powerful tools, simulations, and hyper-realistic war rooms strung together by the power of ML and AI for defenders of organizations, helping one to move from a technical leader to enterprise leader in Cybersecurity domain.

01 Gain 360° Perspective on Building a Cyber Resilient Organization

The program modules and learning path are carefully crafted to maneuver your learning journey from a novice to pro on a fast track mode. The program provides deep skills on essentials like Network & Infrastructure Security & OS Security; intermediate skills like Vulnerability Assessment & Penetration Testing, SIEM technologies; niche & advanced skills like Threat Intelligence, Hunting & Forensics, Security Analytics, Governance, Risk & Compliance, Cyber Law, Security Engineering, and more.

02 Learn from Industry Thought Leaders and Peers

Modules are taught by practitioners and thought leaders with decades of experience in

building large multi-tenant cyber resilient organizations. The mentors of this program include CISOs, VPs, CTOs, CIOs, and Senior Directors of marquee organizations providing unparalleled networking opportunities and career enhancement opportunities.

03 Hands-on Learning with Focus on Research and Innovation

At the end of this program, the learners will get to work on ten plus mini-projects and two industry-grade projects, and one research publication(s). These projects are mentored by industry thought leaders and hence career transformational.

04 Lateral Placement with Career Guidance and Support

A wide network of 50 plus industry mentors, 100 plus marquee organizations as placement partners, 1000 plus strong alumni network ensure that all our learners are successfully transitioning into cybersecurity leaders during the program. The lateral placement process is uniquely designed with one-on-one career guidance and mentoring sessions, resume building support, special training, and mock interviews, helping each of our learners to be placed nationally and internationally on an average of 50 to 200% increase in salary.

05 100% Practical, Simulated Environment to Learn Real Skills from Global Partners

iLabs from EC-Council: Our learners will get access to EC-Council's virtual private cloud-based iLabs to practice 100 plus exercises in a real-time environment. iLabs have preconfigured vulnerabilities, exploits, tools, and scripts that can be accessed from anywhere.

Microsoft Azure: Access to Azure Sentinel, a top-notch, cloud-native SIEM to collect, correlate, and analyze data across users, devices, applications, and infrastructure at cloud scale—on-premises and in multiple clouds.

Cyber Range in partnership with PurpleSynapz helps to learn in a hyper-realistic simulation platform, designed for modern teams to master the best Infosec skills by fighting real-world cybersecurity attacks.

State-of-the-Art Cybersecurity Labs and Security Operations Center at the Corporate Training Center at REVA University campus conducive for research and innovation.

06 Global Certifications and Course Materials in Cybersecurity

Participants can earn three global certifications along with the Master's degree.

Certified Ethical Hacker (CEH) or Computer Hacking Forensic Investigator (CHFI) by EC-Council, Microsoft Certified Azure Security Engineer Associate (AZ-500) and Purple Range – A Cyber Range Certification. They will also get access to course materials and labs on Certified Penetration Testing (C-PENT).

Security Operations Center - SOC at the campus

REVA
UNIVERSITY
Bengaluru, India

Cybersecurity is a subject that requires logic, knowledge, thought and commitment.

- Ian R. McAndrew

Cyber Range as a Simulator

Exclusive Cyber Range as Simulator

Cyber Range is an infrastructure deployed to reproduce a real-life security infrastructure just like a test lab to train your team(s) to defend against cyberattack scenarios. The participants will get access to this virtual environment on cyber warfare scenarios throughout the program. For beginners, a Cyber Range is composed of 4 teams: Red, Green, Blue, and White in which each participant plays an important role to create a safe and secure environment for enterprises. This exposure to real-time emulator will provide our participants with a comprehensive, detailed and practical learning space to build their cybersecurity skill sets.

The Green Team simulates legitimate users over wire or wireless connections with their desktops, laptops, tablets, smartphones to the application infrastructure hosted on the network infrastructure managed by Blue Team.

The Red Team simulates malicious users launching cyber attacks to the user's computer with the help of different vectors to install viruses, trojans, worms, spywares, adwares, and malwares.

The White Team creates the cyber attack scenarios and then monitor the success or failure of Blue Team to defend against cyber attacks launched by Red Team, keeping the availability, scalability, security and performance of network infrastructure and application infrastructure for Green Team.

The Blue Team simulates the users managing the availability, the scalability, the security and the stability of network infrastructure and application infrastructure.

Program Objectives and Industry-ready Outcomes

“ Cybersecurity is a subject that requires logic, knowledge, thought and commitment. ”

- Ian R. McAndrew

Program Objectives

This program in Cybersecurity in association with various industry and academic partners is designed and curated exclusively for working professionals. The participants will be able to make transition into mid and senior cybersecurity professionals with deep analytics skills. Provide in-depth knowledge and skillsets in Cybersecurity to monitor, prepare, predict, detect, and respond to cyber attacks and manage enterprise security.

Learning Outcomes

- | | | | |
|-----------|--|-----------|---|
| 01 | Gain hands-on experience on various security technologies to defend, detect or monitor security threats. | 04 | Design and implement a robust Cyber Incident Response plan & Breach Readiness. |
| 02 | Understanding of Cyber Laws & Security Frameworks such as NIST & ISO. | 05 | Design and implement information security governance, risk management, and compliance practices. |
| 03 | Develop information security policies and procedures to protect the enterprise from existing and emerging cyber threats. | 06 | Work with internal stakeholders in the enterprise and be the subject matter expert in cybersecurity to build cyber resilient systems and processes. |

Bespoke Program Structure

“ The hacker didn't succeed through sophistication. Rather he poked at obvious places, trying to enter through unlock doors. Persistence, not wizardry, let him through. ”

- Clifford Stoll

Program Structure

84 Credits | 4 Semester | 16 Modules | 10+ mini-projects | 2 Capstone Projects with Industry Mentorship | 3 Global Certifications | 1 Research Paper Publication

Semester 01

- 1. Network Fundamentals and Infrastructure Security (4)
- 2. OS and Web Application Security (4)
- 3. Threat and Vulnerability Management (CEH)* (4)
- 4. Penetration Testing (Aligned with OSCP) (4)

Semester 02

- 5. Cyber Threat Modeling and Risk Management (4)
- 6. Security Operations Analyst (SC-200)* (5)
- 7. Cyber Threat Intelligence and Threat Hunting (4)
- 8. AI for Cybersecurity (5)
- 9. Capstone Project I (10)

Semester 03 (Electives any four)

- 10. Cyber Attack Scenarios (4)
- 11. Elective 1 (4)
- 12. Elective 2 (4)
- 13. Elective 3 (4)
- 14. Elective 4 (4)

Semester 04

- 15. Capstone Project II (12)
- 16. Capstone project III - Publication (10)

(n) Number of Credits

*Candidate can enrol for a one year program and exit at the end of second semester (one year) with a PG Diploma in Cybersecurity. Those who are enrolling for M.Sc, this option is not available.

* With Exam Voucher

Elective Tracks (Choose any four)

Elective 1: Application and Product Security

Secure Coding & Code Review

DevSecOps

Secure Design and Threat Modeling

Mobile, Web and API Security

Elective 2: Security Monitoring and Operations

Advanced SIEM and SOAR

Digital Forensics and Incident Response

Cyber Range and Red Team Simulations

Malware Reverse Engineering

SOC Automation and Metrics

Elective 3: Governance, Risk and Compliance (GRC)

GRC and Audit Frameworks

Data Privacy and Protection

Business Continuity and Disaster Recovery

Cloud Security Governance

AI Security Governance

Elective 4: Emerging Tech Security

Post-Quantum Cryptography

Blockchain and Distributed Ledger Security

Identity and Access Management

Future-Ready Program Curriculum

REVA
UNIVERSITY
Bengaluru, India

“ Even the bravest cyber defense will experience defeat when weaknesses are neglected. ”
- Stephane Nappo

Semester 1

Building Your Cybersecurity Foundations

Kickstarts your journey into the world of cybersecurity. You'll master the essentials of **network and infrastructure security**, dive into **OS and web application security**, explore **threat and vulnerability management (CEH²-aligned)**, and get hands-on with **penetration testing (OSCP-aligned)**.

By the end of this semester, you'll be equipped with the core skills to identify, exploit, and secure real-world systems—building a strong foundation for your cybersecurity career.

Semester 2

Defending the Enterprise

Semester 2 takes you deeper into the world of advanced cybersecurity. You'll learn to anticipate and mitigate attacks through **cyber threat modelling and risk management**, sharpen your SOC skills with the **Security Operations Analyst (SC-200¹-aligned)** module, and gain hands-on expertise in **threat intelligence and proactive threat hunting**. A unique highlight is AI for Cybersecurity, where you'll explore how artificial intelligence is transforming defence strategies. Alongside, your first Capstone Project with industry mentorship helps you apply knowledge to real-world scenarios.

By the end of this semester, you'll be ready to operate in SOC environments, detect and respond to sophisticated threats, and leverage AI-driven defense for enterprise security.

Semester 3

Specialization and Emerging Frontiers

In this semester, you'll put your skills to the test with Cyber Attack Scenarios, where real-world offensive and defensive strategies are simulated to sharpen your tactical expertise. The semester is driven by elective flexibility—choose any four electives (4 credits each) from specialized tracks to shape your career path.

- Elective Track I: Application & Product Security – Build secure systems through Secure Coding, DevSecOps, Threat Modeling, and API Security.
- Elective Track II: Security Monitoring & Operations – Master advanced SOC operations with SIEM, SOAR, Forensics, Red Teaming, and Malware Reverse Engineering.
- Elective Track III: Governance, Risk & Compliance (GRC) – Gain leadership skills in Privacy, BCP/DR, Cloud & AI Security Governance.
- Elective Track IV: Emerging Tech Security – Explore the future with Post-Quantum Cryptography, Blockchain Security, and Identity & Access Management.

By the end of this semester, you'll have the freedom to specialise or diversify, aligning your electives with your capstone project, research goals, or industry aspirations—building a unique expertise profile that sets you apart in the cybersecurity job market.

Semester 4

Research, Innovation & Industry Impact

The final semester is all about demonstrating mastery and creating impact. Through Capstone Project II (8 credits), you'll tackle an advanced, industry-driven cybersecurity challenge, applying everything you've learned to deliver innovative, real-world solutions. Capstone Project III (6 credits) focuses on research and publication, where you'll contribute to the global knowledge base by publishing your work in a reputed journal or presenting it at a recognized conference, leading to publication.

By the end of this semester, you won't just graduate with technical expertise—you'll have a strong industry portfolio, a published research contribution, and the credibility to step into leadership or specialized roles in the cybersecurity ecosystem.

Partners and Global Certifications

“ The hacker didn't succeed through sophistication. Rather he poked at obvious places, trying to enter through unlock doors. Persistence, not wizardry, let him through.

- Clifford Stoll

Partners

This program is powered by
**various globally
renowned marquee
organizations.**

This program is powered by various globally renowned marquee organizations. RACE, REVA University is an academic partner for EC-Council, PurpleSynapz, AWS, Microsoft, CloudxLabs, and others. Cybersecurity participants will get unlimited access to our academic partners' ecosystem which includes the Cloud labs access, Course Materials, Partners' LMS, Placement services, mentoring sessions, and more.

EC-Council

EC-Council (International Council of E-Commerce Consultants) is the world's largest certification body for Information Security professionals. EC-Council certifies individuals in information security and e-business skills. It has been certified by American National Standards Institute to meet ANSI 17024 standards and offers programs in 107 countries. The Information Security community considers EC-Council as its most trusted source for vendor-neutral Information Security.

RACE participants will benefit from the association with access to 100 plus real-time exercises, iLabs and associated industry certifications.

Microsoft Azure is the leading cloud platform and productivity company for the mobile-first, cloud-first world, and its mission is to empower every person and every organization on the planet to achieve more. Through this partnership, our participants will get access to their 100's of courses, certification opportunities, and placement services. Cloud labs with credits will be provided to practice the real-time deployment of projects.

One of the niche cybersecurity training and solution builders, RACE programs deploy their Purple Range (Cyber Range), a hyper-realistic simulation platform designed for modern teams to learn the best Infosec skills by fighting real-world cybersecurity attacks. Our participants will get to team up on 20+ inbuilt real-world attack scenarios and launch a variety of realistic cyber-attacks to test team readiness and approach.

Terralogic is a USA-based well-known software and IT services company, an expert in IoT, Cloud, DevOps, App development, Cybersecurity, and many others. Terralogic is the knowledge partner for RACE Cybersecurity programs, helping us to build cyber professionals with deep technical understanding. The Terralogic team supports us in creating the right ecosystem of industry partners, tools, platforms, domain understanding, etc., in cybersecurity.

3 Global Certifications with Exam vouchers.

Continuous Evaluation and Certification

“

Security used to be an inconvenience sometimes, but now it's a necessity all the time.

- Martina Navratilova

”

Continuous Evaluation

This is a globally accredited program to make the participants truly global citizens. At par with international standards and to provide opportunities for global mobility to our participants, we follow an outcome-based education system (OBE). Experiential learning and project-based pedagogy have been employed in the design and delivery of the program.

Never
Stop
Learning!

The objective of module assessment and evaluation is to objectively assess the learners of the program on their ability to apply the Cybersecurity concepts and skills in various domains and verticals through a continuous evaluation framework throughout the program. Detailed regulations on earning the credits and GPA's will be shared during the program.

Participants' Profiles

Diversity is a Catalyst to Learning

At the end of the day, the goals are simple: safety and security.

- Jodi Rell

Participants' Profiles

RACE, REVA University provides an excellent opportunity to learn from a diverse group of extremely talented and committed peers. As a discerning candidate, one must always consider classroom diversity as a key factor while choosing the program. At RACE, we believe in multi-disciplinary research and collaborations. You will not only interact with your cohorts but also with other program participants through various collaborative tools like MS-suite/LMS and other social groups. A diverse peer group with varied skills and career aspirations is a must to widen your network for bringing new opportunities. These peers might become your colleagues, clients, or vendors in the future.

”

- Stephane Nappo

Research and Innovation

For a discerning learner, RACE provides unlimited opportunities to improve one's resume through participating in industry-grade projects and consulting opportunities. RACE consulting solutions either with turnkey or plug n play models provide end-to-end design, implementation, and training support.

A few of the ongoing sponsored projects and commercial products are listed here.

01 RaCeR™: Building an Open Tool Cyber Range System

This is an ongoing project carried out by a team of researchers to build an Open Source Cyber Range (RaCeR) for general users to test and secure their environment/infrastructure by integrating multiple open source tools that provide a set of diverse and comprehensive attack scenarios. This ingeniously developed end-to-end cyber range platform wherein Red teams, Blue teams, Green teams, and White teams collaborate and try out attack scenarios, defend those attacks, and remediate them. This helps users of the platform to induce a thought process on how to secure their organizations' boundaries, perimeter, applications, and other important organizational assets.

02 Security Analytics - DeepSec™

DeepSec is the security analytics framework from RACE labs, which provides multilevel / multidimensional security insights for the professionals to handle the security events with great effectiveness.

03 IoT Security

The emergence of IoT has started a two-way threat scenario, where the control of essential entities will be taken over by an ill-intended hacker posing costly threats. Establishing the identity and authentication along with analyzing the behavior of the entity processes and edge elements are essential in any cyber-physical system. DeepSec model provides the framework based on deep learning to these scenarios, which is trained and tested on the IoT elements of the company.

04 Attack Framework for Smart Cities

This is a live project to define the vulnerabilities of various applications in a Smart City project and develop an Attack Framework against exploitation of the same.

05 Customized Consulting and Projects

RACE undertakes consulting projects in Cybersecurity where participants can get an opportunity to get paid lucrative additional income.

Schedule and Support

Customized to Suit Working Professionals

Get access to
seamless learning and
support **through**
multiple platforms.

“ I believe we will all be responsible for our own security – no vendor, service provider, or even government entity will save us.

- Sean Martin

Program Schedule

Participants will get access to seamless learning and support through multiple platforms. Since most of the services are cloud-based, the support is always available uninterrupted.

Learning Management System:

LMS is the one-stop destination for connecting to the program contents, video recordings of the classes, research repositories like IEEE, EBSCO and others, assignment submissions, connecting with mentors, etc.

The program office provides customized support in resume building, mock interviews, placements and career enhancement sessions, and more.

Our dedicated team of academicians, mentors and researchers will provide support on designing and writing technical reports, publishing in reputed journals and conferences, etc., various support sessions/webinars/special sessions will be held in addition to the regular session during evenings and weekends.

We conduct regular boot camps, workshops and hackathons to help our participants to implement cybersecurity projects or writing reports with hands-on support sessions.

Eligibility to Apply

Application Process and Program Fee

There's no silver bullet solution with cybersecurity, a layered defense is the only viable defense.

- James Scott

Who Can Apply?

Candidates who aspire for a career transition to job roles such as Security Engineer, Security Analyst, Security Architect, Product and Application Security Expert, GRC professionals or CISO roles, etc., can apply to this one-of-a-kind 24-month M.Sc. program in Cybersecurity at RACE.

M.Sc.

Candidates must have a minimum of 50% marks (45% in case of SC/ST candidates) in

- BE/B.Tech in CSE / ECE/EEE/ISE/IT/TE or
- BCA/B.Sc. in IT/CS/ Electronics or
- B.Com/ BBA with Computer Applications or
- Any B.Tech/ BE Degree including M.Tech, Civil with a minimum of 50% marks in aggregate of any recognised university/institution.

Program Fee

	: INR 6.00 Lakhs
1st Year	: INR 4.80 Lakhs
2nd Year	: INR 1.20 Lakhs

Easy EMI option for the payment of fee without hassle from our associated banks is available.

Selection Process

Selection is based on merit and interview. Candidates with 2-3 years of experience should appear for an entrance exam and subsequent interview.

How to Apply

- Visit race.reva.edu.in to apply for the program
- Fill in the details of the Registration Form and Register
- Pay Application Fee of INR 1,000 using preferred payment methods
- Fill in the application and submit

About REVA University and REVA Academy for Corporate Excellence - RACE

“ A breach alone is not a disaster, but mishandling it is. ”
- James Scott

REVA University

REVA University has been established under the REVA University Act, 2012 with the vision to instil awareness, a zeal for higher learning and inquisitiveness in the minds of students through education. REVA University was conceptualised to bring change in the lives of students through the revisualisation of present academic scenario. The University breathes and practises an ideology that takes education to greater heights by motivating each learner. The Founder of REVA University believes in the adage 'Knowledge is Power'. Driven by this power of transforming lives, REVA succeeded in its educational endeavours by creating knowledge societies, imparting quality education and building responsible future generations.

REVA demonstrates a complete involvement in the field of education, which is complemented and enhanced by its verdant surroundings. The University retains a colossal landscape blanketed over 45+ acres of land, which is a standing testimony to inspire learners and smooth exchange of ideas. The University prides itself in contributing to the holistic development of every student.

Currently, the REVA University offers 33 undergraduate programs, 23 full-time PG programs, 2 part-time PG programs in Engineering and Technology, Science, Commerce and Management, Architecture, Law and Humanities in addition to research degrees leading to M.Phil. and Ph.D. in different disciplines.

Facilities

Online library access with research repositories

State-of-the-art infrastructure and digital labs

2000 plus capacity digitally enhanced Auditorium

4000 plus capacity Open air theater

Guest house with 3-star facilities at the campus

Well equipped gym and sports facilities

Brand Store with REVA branded merchandise

Food court with variety of cuisines

REVA Academy for Corporate Excellence - RACE

REVA Academy for Corporate Excellence (RACE) aims to develop visionary enterprise leaders for corporates through progressive and integrated learning capabilities. RACE offers best in class, specialized, techno-functional and interdisciplinary programs designed to suit the needs of working professionals. The pedagogy of each program incorporates social and experiential learning to build transformative proficiencies in every participant.

Each of the programs is planned, designed and delivered by renowned corporate leaders and trainers and combines the latest tools, technologies and skill sets that are in sync with the futuristic demands of the industry. The programs follow a blended mode with lab-based training and 24/7 online support with a learning management system with certifications from REVA University and several industry partners.
